

MODIS-N SPECIFICATION MODIFICATIONS

3.3.3.2 EDGE RANGE

The edge range shall not exceed 50% of the bandwidth in any spectral band.

Table 3.4.5.2 ABSOLUTE RADIOMETRIC ACCURACY REQUIREMENTS*

		REQT (ONE-SIGMA)
Below	3000 nm	5%
Above	3000 nm	1% **
Reflectance Calibration		2%

*Based on use of multiple samples of a uniform, extended, non-polarized source. For bands below 3000nm, a tungsten lamp based source may be used for ground tests.

**Band 20 shall be 0.75% with a goal of 0.50% Bands 31 and 32 shall be 0.50% with a goal of 0.25%.
